## FIRE DOORS > DINING BENCHES SCRAPPED CABIN > CANTEEN AREA

15 years of regeneration activity 2,000 new East Manchester properties 99.86% waste diverted from landfill

'The Way, Beswick', put 2,000 new properties on the map in a neglected area of East Manchester. From the start, Lovell brought Kenny Waste Management on board to make sure that any waste the project generated would be managed responsibly.

Lovell approached Kenny Waste Management to help service this project, ensuring that out of 1,711.483 tonnes of waste we removed from their site, only 0.14% went to landfill.

In 2017, the project had come together with fantastic success, but the regeneration left Lovell with a dilapidated, 15-year old site cabin filled with fire doors to properly dispose of.

Fire doors can be recycled as wood, but upcycling is a more responsible option that's better for the planet. The old cabin would also need to be dismantled before its material components could be recycled, costing valuable resources, time, and effort.

Committed to DEFRA's waste hierarchy, Kenny Waste Management collaborated with Lovell to breathe new life into these waste materials. Our commitment to treating waste materials as a resource (and a lot of hard work) resulted in a new communal dining area and 4 tonnes of waste upcycled for future use.

"This case study showcases the best of both industries, construction and waste management. By treating waste as a resource, Kenny Waste Management upcycled a 15-year old site cabin and fire doors from the previous structures that would have otherwise gone to waste."

Gemma Tovey, Sustainability Co-ordinator at Lovell
